

Tutor Match CRM – Phase 3: Data Modeling & Relationships

Define and implement the data structure of Tutor Match CRM to link **Parents, Tutors, Applications (Bookings), and Sessions**. Configure **record types, page layouts, navigation tabs, and security** so that each role (Admin, Tutor, Parent, Manager, Customer Support) can perform its tasks efficiently.

1. Standard & Custom Objects

- **User (Standard):** Represents system users such as Tutors, Parents, Manager, and Admin.
- **Candidate (Tutor – Custom):** Captures tutor information and tracks their availability, expertise, and sessions. Includes fields for Skills, Experience, Contact Details, and lookup relationships to Applications.
- **Job Post (Custom):** Stores tutoring requests created by Parents. Includes fields for Description, Location, Salary, and Job Type.
- **Application (Custom):** Tracks bookings made by Parents for specific Job Posts. Includes fields for Status, Applied Date, and lookups to Candidate and Job Post.
- **Interview / Session (Custom):** Stores scheduled tutoring sessions. Includes fields for Session Date/Time, Mode (Online/Offline), and Master-Detail relationship to Application.

2. Fields

- **Candidate (Tutor):**
 - Name, Email, Phone, Skills, Experience, Availability
 - Links to Applications and Sessions for tracking assigned tutoring jobs
- **Job Post:**
 - Description, Location, Salary, Job Type (Picklist: Part-Time, Full-Time, Online)
 - Links to Applications to show which Tutors applied
- **Application:**
 - Status (Applied, Shortlisted, Rejected, Hired), Applied Date

- Lookup to Candidate (Tutor) and Job Post
- **Interview / Session:**
 - Session Date/Time, Mode (Online/Offline)
 - Master-Detail relationship to Application
 - Lookup to Interviewer (User)

3. Record Types

- **Candidate:** Full-Time Tutor, Part-Time Tutor
- **Job Post:** Online Request, Offline Request

4. Page Layouts & Related List

- **Candidate Page Layout:** Shows tutor details, skills, availability, and related Applications
- **Job Post Page Layout:** Displays Job details and related Applications

- **Application Page Layout:** Shows Status, Candidate, Job Post, and related Sessions
- **Interview / Session Page Layout:** Displays session details and links to Application
-
- Each record type has a separate page layout to display relevant fields

The screenshot shows the Salesforce Setup interface for the 'Candidate' object. The 'Fields & Relationships' section is active, displaying a list of 9 fields. The left sidebar shows the navigation menu with 'Fields & Relationships' selected. The top navigation bar includes 'Setup', 'Home', and 'Object Manager'. The main content area has a search bar and buttons for 'New', 'Deleted Fields', 'Field Dependencies', and 'Set History Tracking'.

5. Lightning Record Pages & Compact Layouts

Purpose: Provide a tailored view for different users; highlight key fields for quick access.

Key Fields for Compact Layouts:

- Job Post: Job Title, Location, Salary
- Candidate: Name, Skills, Availability
- Application: Status, Job Post, Candidate

8. Schema Builder

Usage: Visualize object models, add or edit fields/relationships, and see dependencies dynamically.

- **Illustrative relationships for Tutor Match:**
 - **One Tutor → Many Booking**

- One **Booking** → Many **Session**
- One **Session** → Many **Feedback**
- One **Booking** → Many **Payment**
- Many **Tutor** ↔ Many **Subject** via **TutorSubject** junction object

9. Junction Objects

- ❖ **Purpose:** To implement many-to-many relationships (e.g. Tutor ↔ Subject).
- ❖ **In Tutor Match CRM:** I created a separate junction object **TutorSubject__c** to link **Tutor** and **Subject**. Each Tutor can teach multiple Subjects, and each Subject can be taught by multiple Tutors.
- ❖ **Why separate it:** Without a junction, you'd need to duplicate or complicate relationships. The junction object makes it scalable and clean.
- ❖ **Optional extra fields:** In **TutorSubject__c**, you can include fields such as **Proficiency** or **IsPrimarySubject** to capture more detail about each linking record.
-

10. External Objects (Future Scope)

- • Let Salesforce access data stored outside its database without duplicating it.
- • In Tutor Match, you could map an external “Tutor Directory” or external “Payment Ledger” into Salesforce as external objects.

- • Use Salesforce Connect to sync external data and relate it to your internal objects (Tutor, Booking, etc.).
- • External objects behave like custom objects but point to external sources
- .
